AMENDMENTS TO THE CLAIMS

1-4 (Canceled)

5. (Currently Amended) A tool head comprising:

an arcuate peripheral surface of the tool head comprising a shape conforming to a segment of a cylinder with said cylinder having a predetermined axis running the length of said cylinder;

a planar peripheral surface subtending the arcuate peripheral surface, said planar peripheral surface extending ~~parallel to said axis~~ perpendicular to said arcuate peripheral surface and being disposed oppositely ~~of said axis~~ from the arcuate a center of the an arc conforming to said arcuate peripheral surface;

~~an a forward~~ axial end face terminating the arcuate peripheral surface and the planar peripheral surface, the forward axial end face including at least one planar face surface extending normal to said predetermined axis; and

a rectangular recess being defined by the tool head and extending into the tool head in a direction along said predetermined axis from the forward axial end face, and said rectangular recess extending from the arcuate peripheral surface in a direction perpendicular to said predetermined axis from the arcuate peripheral surface.

6. (Currently Amended) The tool head of claim 5, further comprising ~~means~~ a rod structure disposed at an ~~axial~~ end of the tool head oppositely of said forward axial end face for attaching a handle to the tool head.

7. (Currently Amended) The tool head of claim 5, wherein the forward axial end face comprises:
an arcuate outer planar face surface ~~extending~~, which extends radially inward from the arcuate
peripheral surface; and

a central planar face surface disposed radially within the arcuate outer planar face surface and
recessed inwardly of the tool head from the arcuate outer planar face surface in a direction along said
predetermined axis from the arcuate outer planar face surface, and

wherein said central planar face surface is substantially perpendicular to said arcuate
outer planar face surface.

8. (Currently Amended) The tool head of claim ~~7~~5, further comprising ~~means for a screwhead~~
releasably ~~attaching~~ attaches a handle to the tool head, said ~~means being~~ screwhead is disposed at an
~~axial~~ end of the tool head ~~axially~~ opposite of said forward axial end face.

9. (Currently Amended) The tool head of claim 5, ~~further comprising~~ wherein the tool head ~~being~~
is a single piece of unitary construction.

10. (Currently Amended) The tool head of claim 5 wherein ~~the tool further comprises the tool head~~
~~being~~ is unitarily constructed of a material selected to dissipate static electricity.

11-14 (Canceled)

15. (New) The tool head of claim 5, wherein the predetermined axis is perpendicular to the planar
peripheral surface.

16. (New) The tool head of claim 5, wherein the rectangular recess is a slot shaped configuration, said slot shaped configuration comprises a width oriented transverse to said predetermined axis.
17. (New) The tool head of claim 5, wherein the rectangular recess axially extends into the tool head from at least the planar peripheral surface.
18. (New) The tool head of claim 5, wherein the rectangular recess radially extends inward into the tool head from the arcuate peripheral surface.
